

## WORD PROBLEMS TO CHALLENGE THE MIND...

1. Birdie is traveling to the moon next month for a special class on cheese making. While she's on the moon, she wants to look her best, so she's going to carry 38 bottles of glitter – the kind you put on your face. The glitter costs 95 cents a bottle. How much will the whole batch cost?
2. On Jackson's planet, money is made out of potato chips. One chip is worth 37 cents of our money. The other day, Jackson bought a new Devin action figure, which cost 18 chips. Now he wants to sell it here on Earth. How much should he charge in American money so that he makes a profit of one dollar on the deal?
3. Back in the old days, people believed that eating Poptarts made you good at math. The average Poptart weighed 28.65 grams. How many milligrams would that be?
4. If Nolan started his homework at 5:31 PM and finished one hour and twenty-three minutes later, what time did he finish?
5. Gus's got a new brand of after-shave on the market. It's called **GUS – A MANLY FRAGRANCE**. Anyway, Jacob bought 6 bottles at Macy's Department store. (**GUS** is only sold at finer stores.) He received \$4.64 back from a fifty dollar bill. How much does a bottle of **GUS** go for these days?
